Taxi Key Insights and Actions

Most Used Vehicle Type

- SUV → 44 trips
- Mini → 39 trips
- Sedan → 37 trips

Insight
SUV is the most preferred vehicle type by customers.

Action

- Increase SUV driver availability
- Provide SUV offers during peak hours
- Ensure more SUV drivers in high-demand locations

Highest Revenue Vehicle

Insight
Sedan generates highest revenue per trip.

Action

- Promote Sedan rides
- Create Sedan upgrade offers
- Target business travelers

Payment Mode Trend

Insight
Cash payments are slightly higher than digital payments.

Action

- Promote digital payment discounts
- Offer cashback for UPI or card payments
- Reduce cash handling risk

Average Trip Distance

Average distance: 14.38 km

Insight
Most trips are short to medium distance city rides.

Action

- Introduce short-distance ride packages
- Optimize driver allocation in high-density areas
- Provide quick ride matching

Surge Pricing Impact

Insight
Many rides are happening during surge pricing periods.

Action

- Encourage more drivers to be online during peak hours
- Offer driver incentives during surge periods
- Improve supply-demand balance

Fare Distribution

Insight
There is a large variation in fare depending on distance and surge.

Action

- Show fare estimate before booking
- Improve pricing transparency
- Optimize pricing strategy for long trips

Overall Project Conclusion

- SUV is the most frequently used vehicle type indicating higher demand for larger vehicles.
- Sedan rides generate highest average revenue, suggesting premium ride preference.
- Cash payments still dominate slightly, indicating digital adoption opportunity.
- Average trip distance is around 14 km, showing typical urban commuting patterns.
- Surge pricing significantly impacts fares, showing peak demand periods.
