# Airline Key Insights & Action

## Most Flights Operated by Indigo

- Indigo: 149 flights
- Air India: 148 flights
- SpiceJet: 138 flights
- Vistara: 115 flights

Insight:
Indigo and Air India dominate the flight operations, while Vistara operates the least flights.

Action:
Airports and management should ensure sufficient resources and ground staff for Indigo and Air India flights because they handle the largest volume.

---

## Delhi Airport Has the Highest Traffic

Insight:
Delhi airport handles the highest number of departures, indicating it is a major hub.

Action:
Airport authorities should improve runway scheduling and ground operations at Delhi to reduce congestion and delays.

---

## High Number of Major Delays

Delay category distribution:

- Major Delay: 276 flights
- Minor Delay: 194 flights
- On Time: 80 flights

Insight:
More than 50% of flights experience major delays, and very few flights depart on time.

Action:
Airlines should optimize scheduling, aircraft turnaround time, and boarding processes to reduce delays.

---

## Actual Departure is Later Than Scheduled

The dashboard shows that actual departure times are generally later than scheduled times.

Insight:
Flights frequently depart late, which indicates operational inefficiency or poor time management.

Action:
Airlines should:

- Improve flight scheduling
- Reduce boarding delays
- Improve ground handling coordination

---

## Lower Traffic at Some Airports

Airports like BLR and MAA have fewer flights compared to DEL and HYD.

Insight:
Traffic distribution across airports is uneven.

Action:
Airline companies could redistribute routes or increase flights from underutilized airports to balance operations.

---

## Overall Project Conclusion

- Indigo operates the highest number of flights.
- Delhi airport is the busiest origin airport.
- Major delays dominate the dataset, indicating operational inefficiencies.
- Only a small portion of flights depart on time.
- Improvements in scheduling, airport operations, and airline management are needed to reduce delays.
